Street # 6c, Lajpat Road,
Shahdara, Lahore

EDUCATION

2022 – 2026

Bachelor of Computer Science

Government College University
Faisalabad

Completed 2022

Intermediate of ICS

Govt Degree Colleges Women

Completed 2020

Matriculation of Bio Science

Al-Azeem High School

SKILLS

Programming: C++, HTML, CSS,
JavaScript

Core Concepts: PF, OOP, DSA,
DBMS, OS, Software Engineering

Web Development: Front-end
design, basic back-end integration

Platforms: VS Code

IT Support: Basic level course
from Microsoft

- Strong Communication &
Presentation Skills
- Leadership and Team

- Coordination
- Project Management & Time
Management
- Problem-Solving and Adaptability

About me

I'm a BSCS graduate with a strong interest in Full Stack Web Development. Skilled in React.js, Node.js, Express.js, and MongoDB, with hands-on experience developing web applications using the MERN stack. Passionate about learning new technologies, solving real-world problems, and contributing to innovative software projects. Eager to start my professional career in a dynamic environment where I can further enhance my technical and professional skills.

Experience

Frontend Developer

Developed and maintained responsive user interfaces using React.js, ensuring cross-browser compatibility and mobile-first design. Integrated frontend components with robust backend workflows utilizing Node.js and Express.js to handle data efficiently. Collaborated on designing clean, modular, and scalable code structures following industry best practices. Troubleshoot UI rendering bugs, optimized frontend performance bottlenecks, and improved user workflows. Actively participated in continuous learning, ensuring modern web aesthetics and smooth user experiences across layouts.

Project

LifeLine – Blood Donation Management System

This full-stack web application connects blood donors, hospitals, and recipients using the MERN Stack (MongoDB, Express.js, React, Node.js). Features secure JWT-based authentication and authorization with bcrypt password hashing for role-based access (donor, recipient, hospital, admin). Implemented RESTful APIs for donor search, blood request management, donation tracking, and blood bank inventory across multiple cities. Designed a donor eligibility system with automated 90-day donation cooldown tracking, and built an admin dashboard with real-time statistics, low-stock inventory alerts, and user management. The responsive, modern UI is built using React, React Router, and Tailwind CSS, utilizing MongoDB aggregation pipelines for detailed analytics and dashboard summaries.

Career Objective

Motivated and enthusiastic BSCS graduate seeking an opportunity to begin my professional career in the software industry. Eager to apply my knowledge of full stack web development, problem-solving abilities, and technical skills in a challenging environment. Passionate about learning new technologies, contributing to innovative projects, and continuously improving my expertise while delivering high-quality solutions. Looking forward to working with a professional team where I can grow both personally and professionally and make a valuable contribution to the organization's success.
